New Loan Originations

- Originations overall are reduced due to both rising interest rates and an intentional slowing to temper growth
- Commercial loans make up a greater portion of all originations over time, making up 76% of all originations in 2024 compared to 49% in 2014

Loan Growth

- Although originations have slowed, they are keeping up with repayments largely through funding of construction loans previously originated.
- Mortgage and Consumer loans currently make up 44% of total net loans compared to 74% in 2014 as a result in the origination trend noted at left
- Loans HFI increased by \$3.2 billion through LBC merger

Strong Credit Quality

Strong Credit Quality Characterized by Limited Charge-Offs

The Bank experienced nine consecutive years of net recoveries, fiscal 2014 through fiscal 2022, during which net recoveries totaled \$74.8 million. Although we experienced net charge-offs in fiscal 2023, these have been the result of a two large charge-offs rather than a more widespread issue within the overall portfolio. Charge-off and Recovery activity has been minimal in FY 2024.

Borrowings and Debt Outstanding & Weighted Rate

Borrowings are 70% FHLB and 28% Fed's Bank Term Funding and are used in part to manage interest rate risk. Current period increase reflects the addition of borrowings and debt in the LBC merger. Acquired debt and borrowings increased the weighted average rate at 3/31. Increase in borrowings for 2020 was from locking in \$1 billion of funding at a fixed rate of 66 bps for 10 years. More recent increases served to ensure sufficient balance sheet liquidity.
